## Pipette & Burette Rinsing Set

- Designed for washing pipettes & burettes up to 600mm long.
- Range of sizes available to suit the application.
- Polyethylene rinsers (Art. 215 & Art. 217) fill via the spray nozzle situated on the top rim, eliminating back-syphoning as the water inlet is located above and away from any contaminated waters.
- All contaminated water syphons out of the rinser through the specially designed syphon pipe leading to the large bore outlet tube situated underneath the rinser.
- The rinser refills automatically during this process.
- Pipettes and burettes are contained in specially designed baskets during washing to minimise breakage.

The washing process is as follows:

- Place the pipettes in the basket (Art. 219 or Art. 222).
- Place the basket into the jar (Art. 218) full of washing solution. Leave to soak for 2-3 hours so the solution can clean the pipettes.
- Remove the basket from the jar (Art. 218) and place in the rinser (Art. 215 or Art. 217). Connect the water pipe to the spray nozzle, and the outlet tube to a drainage point.
- Fill the rinser with water, add detergent solution and shake several times to ensure a thorough washing.
- Turn the water tap on and allow rinsing cycle to complete.

Full instructions are included with each product in the range, containing more details depending on the application required.

Suggested sets consist of the following products:

Pipettes – 1 x 217, 2 x 219 and 1 x 218

Burettes – 1 x 215, 2 x 219, 2 x 1219 and 1 x 218
